Hints and Tips Unit 4

The information in this guide will be helpful to you when you are ready to complete your assessment:

Unit 4: Visual Management Systems

Section 1 – Understand visual management systems

Q1. Explain the purpose of a visual management system.

For this question, think about what a visual management does and why it is used. As an explain question you will need to include detail to demonstrate a full understanding and should also include its benefits and if there are any disadvantages.

Q2. Using the 2-part case study for Physical 3D on page 2 of the course material, **Identify** appropriate parts of a process or work area that will benefit from the visual controls. These could be from any part of Physical 3D's operations that you've read about so far e.g., assembly, office, storage, stairwells.

The case study demonstrates how Physical 3D review some of their processes and work areas. You may look back to previous units to other Physical 3D case studies and think about how such a review could be applied to the different situations. For this answer, choose one process/work area from any of the case studies and identify the individual parts that will benefit from visual controls. Remember that for 'identify' your list should have a few words added for each item to demonstrate understanding.

Q3. Describe the factors to be considered when selecting a visual management system.

Include at least 3 different factors in your answer and ensure that you describe each one separately. Think about why each is important and the impact it has on the work area.

Q4. Describe the visual management systems available to create 'the visual workplace'.

There are many different visual management systems and the course content covers several, which you may choose or include some others that you know about. Include at least 3 in your answer and for each one, be sure to describe the display and how it's used.

Q5. Identify elements that contribute to good visual management in the workplace.

There are many elements that should be considered for all types of visual management systems and the course content includes a range of these, you may also consider others that you know of. Include three in your answer and provide a few words to demonstrate understanding of each one.

Q6. Prepare an appropriate visual indicator for your chosen process or work area from question 2 above. You may use the space below for this or attach a separate document with your visual indicator.

You may choose any visual indicator that you've learnt about for this question. It may be easier to create this in a separate document or different application e.g., PowerPoint. Alternatively, you could draw this on paper and upload a photo. You should include a short description for the use of the visual indicator within the assessment. This will evidence your own work and demonstrate understanding.
