Hints and Tips Unit 5

The information in this guide will be helpful to you when you are ready to complete your assessment:

Unit 5: Problem Solving

Section 1 – Understand how to identify and solve problems

Q1. Describe the business need for problem identification and removal

There are several reasons for why the identification and removal of a problem within a business is important within the course material. For this answer, you should include at least two of these and fully describe why each is beneficial.

Q2. Describe the benefits of adopting a formalised problem-solving process

Include a minimum of two benefits within your answer with a distinct description for each one

Q3. Explain the impact of unresolved problems

At least two impacts must be included in your answer. As an explain you will demonstrate a deeper understanding than describing. Think about who is impacted and how they are affected. Is it just the individual or the whole team or business that feels the impact?

Q4. Explain how to identify and verify the root cause of a problem

You should explain at least two different ways to identify and verify the root cause of a problem. Your explanation should include why it's important; do you think this is a good method? Are some methods better than others in different situations? What might cause difficulty with a method?

Q5. Explain how to prevent reoccurrence of the problems

With your explanation think about why the steps are important; are there any difficulties that are likely to be encountered, do all steps need to be included and what might happen if any are left out?

Q6. Read the above case study and in the box below, **suggest how the managing director will carry out the structured approach to problem solving**. Include the steps that they will take and what areas of the business she should review

You have explained how to identify and verify the root cause of a problem in question 4. For this question you need to apply this knowledge to the case study and provide information for how the given problem should be approached, ensuring that you cover the main steps of a structured approach.
