

# Create a screenprint on a PC

There will be times when you need to evidence your work. You can do this by taking a picture of your screen - this is known as a screenprint.

Follow these instructions to take a screenprint on a PC:

1. When your computer screen is displaying the content you want to take a picture of, press the **PrtScr** key on your keyboard. This key is normally towards the top right corner of the keyboard.

2. This will create a Copy of your screen content and now all you need to do is Paste into a word document.
3. Open up a Word document.
4. Position your cursor at the point in the document where you would like the screenprint to appear.
5. Right click at this point, then select Paste from the menu that appears.

Once you have pasted a screenprint, you can use the **Format** tab to crop it into the right shape and size.
