and
Tips

Unit 2

Contents

Section 1 – Understand cyber security terminology	4
Section 2 – Understand current and emerging challenges in cyber security	6
Section 3 - Understand what is meant by social engineering	7

Hints and Tips Unit 2

The information in this guide will be helpful to you when you are ready to complete your assessment for the following unit:

Unit 2: Understand Terminology Used In Cyber Security Level 2

Section 1 – Understand Risk Factors

- Q1.** In the table below, define what is meant by the following in relation to cyber security:
- hardware
 - software (You must include a definition of operating system software and application software in your response.)
 - data management (You must include confidentiality, integrity and accessibility in your response)
 - networking (You must include definitions of LAN, WAN and MAN in your response.)

for this question you need to take note of the instructions in italics as the learning outcome requires you to consider these factors in your answer. Please ensure that you cover all of the points requested.

- Q2.** In the box below, describe the differences between LAN and WAN

For this question you need to describe the difference between a LAN and WAN. You may also find it useful to give a basic description of networking concepts to demonstrate understanding.

- Q3a.** In the table below, explain the following terms in relation to cyber security:

For each of the terms listed you need to explain what they mean when talking about cyber security. Think about the following when formulating your response:

what is a vulnerability?

What is a risk?

What is an attack?

What does protection mean?

What does recovery mean?

Q3b. In the table below, explain the following types of threat in relation to cyber security:

This question relates specifically to the different threat types. You simply need to explain what each of them is and what it is designed to do.

Q4. In the box below, Describe organisational strategies in relation to cyber security.

When answering this question you must include a description of SOC (security operations centre) and NOC (network operations centre).

Section 2 – Understand current and emerging challenges in cyber security

Q1a. In the table below, give at least 2 examples of current challenges in cyber security.

For this question, you need to consider two examples of the challenges that are currently faced in cyber security.

Q1b. In the table below, give at least 2 examples of emerging challenges in cyber security.

For this question you need to consider emerging challenges and provide two examples. Think about the latest developments and how they are going to impact cyber security.

Section 3 - Understand what is meant by social engineering

Important, please note; for learning outcomes 3.1 to 3.6. you must use a 'real-world' instance of social engineering to meet the requirements. You could do this by looking at a friend, family member or work colleagues social media accounts to identify information that could potentially be used to carry out social engineering on their peers. Alternatively you may want to carry out research to gather information about a business or individual that could be used to design a social engineering attack.

Q1. In the box below define the term 'social engineering' and provide an example of how it is used

For this question you need to give a brief definition of what social engineering is and give at least one example of how it used to demonstrate understanding.

Can you think about an instance when you were targeted by a cyber criminal? This could have been via, telephone, email or text/instant messaging? Alternatively you may use the experience of a family member, friend or an example that you have read about.

Q2a. In the box below explain the type of attack and what happened.

For this question you need to relate it to your own experience or the experience of a friend family member or colleague. If you are unable to identify an experience from these you can carry out research and use an example that was reported.

Q2b. In the box below, explain what the cyber criminal was hoping to achieve from the attack?

For this question you need to relate your answer to the example for your response to question 2a and explain what the cyber criminal was trying to achieve from the attack.

Q2c. In the box below, explain what benefits that the social engineering methods used in the attack were for the cyber criminal

As with 2b you need to relate this to your example you gave in your response to question 2a and explain the benefits of the methods used in the attack were.

Q3a. In the table below, describe what is meant by open source information.

For this question you need to provide a description of what is meant by open source information. Try to give examples to demonstrate understanding.

Q3b. In the table below, Identify the different types of information that you could obtain through open source information about friends, family member or work colleagues. You must give at least 3 examples.

This is an identify question so you only need to list the different types of information that you could find through open source.

Q4a. In the box below, identify the different types of information that a cyber criminal could obtain using open sources.

This is another identify question so you only need to list the different types of information that a cyber criminal could obtain using open source.

Q4b. Using social media, look up a friend, family member or colleague and describe the information that a cyber criminal could obtain about that person in the box below.

Using your research describe the information that you have found that a cyber criminal would find useful.

Q5a. In the box below, describe the different techniques that could be used as part of social engineering.

This is a describe question so make sure that your answer is in sufficient detail to demonstrate understanding of the different techniques that a cyber criminal could use in social engineering.

Q5b. Using the information that you have obtained through your research conducted in this section so far, provide a description of the techniques that a cyber criminal could use to carry out an attack on friends, family members or colleagues.

In previous questions you have gathered information about a friend, colleague or family member. Using this information, and your understanding of the social engineering techniques available, describe how a cyber criminal could use this information to carry out an attack.

Q6. Evaluate the information that you have gathered during your research and in the box below, provide details of how a cyber criminal could benefit by conducting a social engineering attack on one or more of the people that you have researched.

As you have worked through section 3 you should have gathered quite a bit of information about a friend, family member or colleague. Using this research provide details of how this information could be used to the benefit of the cyber criminal.
