IT User Skills Level 1

IT security
for users
Unit

Learning
outcomes

IT security for users Unit

Learning outcomes

- A1.1 Identify security issues that may threaten system performance
- A1.2 Take appropriate security precautions to protect IT systems and data
- A1.3 Identify threats to information security associated with the widespread use of technology
- A1.4 Take appropriate precautions to keep information secure
- A1.5 Follow relevant guidelines and procedures for the secure use of IT
- A1.6 Describe why it is important to backup data securely
- A1.7 Ensure personal data is backed up to appropriate media

- B1.1 Describe the security issues that may threaten system performance
- B1.2 Apply a range of security precautions to protect IT systems and data
- B1.3 Describe the threats to system and information security and integrity
- B1.4 Keep information secure and manage personal access to information sources securely
- B1.5 Describe ways to protect hardware, software and data and minimise security risk
- B1.6 Apply guidelines and procedures for the secure use of IT
- B1.7 Describe why it is important to backup data and how to do so securely
- B1.8 Select and use effective backup procedures for systems and data

- C1.1 Evaluate the security issues that may threaten system performance
- C1.2 Select, use and evaluate a range of security precautions to protect IT systems and monitor security
- C1.3 Evaluate the threats to system and information security and integrity
- C1.4 Manage access to information sources securely to maintain confidentiality, integrity and availability of information
- C1.5 Explain why and how to minimise security risks to hardware, software and data for different users
- C1.6 Apply, maintain and develop guidelines and procedures for the secure use of IT
- C1.7 Select and use effective backup and archiving procedures for systems and data
