

Pseudo code examples

Imperative

```
Import database variable: Year_11_results
Create new variable: Class_C_results
Loop Year_11_results from first student to last student:
    if Class = Class_C:
        Copy student_results into Class_C_results
    else
        next student
```

Declarative

```
Import database variable: Year_11_results
New variable: Class_C_results = FROM Year_11_results EXTRACT students_results if Class
== Class_C
```
