Understanding Autism

Unit 4

Learning
outcomes

Unit 4 - Sensory processing, perception and cognition in individuals with autism

Learning outcomes / Assessment criteria

- 1 Understand how individuals with autism process sensory information.
 - 1.1 Outline how differences in processing sensory information may affect each of the [senses](#).
 - 1.2 Define what is meant by:
 - hypersensitivity
 - hyposensitivity.
 - 1.3 Outline why individuals with autism may experience balance difficulties (vestibular sense).
 - 1.4 Explain how individuals with autism may experience difficulties with body awareness (proprioception).
 - 1.5 Give examples of behaviours that may suggest an individual is hyposensitive or hypersensitive.
- 2 Know how to recognise and support sensory needs.
 - 2.1 Identify examples of the type of environments and situations that might contribute to an individual experiencing sensory overload.
 - 2.2 Give examples of how individuals with autism may respond when experiencing [sensory overload](#).
 - 2.3 Outline strategies that can be used to support individuals experiencing sensory overload.

- 2.4 Describe how to create a 'low arousal' sensory environment.
 - 2.5 Give examples of ways to increase sensory stimulation.
 - 2.6 Describe the benefits of sensory activities for individuals with autism.
 - 2.7 Outline how sensory differences may have an influence on an individual's dietary preferences.
 - 2.8 Explain how to support the dietary preferences of individuals with autism.
-
- 3 Understand the cognitive differences individuals with autism may have in processing information.
 - 3.1 3.1. Outline the difficulties an individual with autism may have with:
 - processing information
 - predicting the consequences of an action
 - organising, prioritising and sequencing
 - understanding the concept of time.
 - 3.2 Describe [strategies](#) that could be used to support an individual with autism to complete activities/tasks.
