

Coding Practices Unit 1

Methodology	Strength	Weakness
Agile	• Flexible • Adaptable • Creative • Innovative • Reduced time-to-market • Higher productivity of team • Improved quality • Customer satisfaction • Employee satisfaction • Organisation transparency	• Training needed • Complexity of skills required • Organisation - initial change needs • Scalability • Not suitable for certain types of projects
Scrum	• Flexible • Adaptable • Encourages creative approaches • Low costs • Less documentation needed • Better quality work • Improved Customer satisfaction • Employee satisfaction • Organisation transparency	• Requires extensive training • Difficult to scale for large projects • Organisation - initial change needs (major transformations often needed) • It can be difficult to integrate with a classic project management approach • it doesn't offer any support for the project meeting its overall deadline • It requires the use of small teams • It requires experienced personnel
Kanban	• Easy to learn • Easy to use • Visual • Adaptable • Collaborative • Low overheads • Reduces costs and waste (JIT / LEAN)	• Needs another framework to work (e.g. Scrum, JIT etc) • Not suitable on plans that are not stable (dynamic) • Is not Iterative • Lack of timing

Methodology	Strength	Weakness
Waterfall	• Easy to use and manage • Suitable for certain types of projects that required a high degree of predictability • Plan-drive approach • Discipline is built in (start/end points) • Documentation	• Difficult to change • Software delivered at end of production • Gathering accurate requirements can be challenging
