Hints and Tips Unit 6

The information in this guide will be helpful to you when you are ready to complete your assessment:

Unit 6: Professional Skills And Behaviours For Cyber Security Level 3

Section 1 – Understand behaviours required for a career in cyber security

Q1. Explain the importance of managing and promoting a positive digital identity:

As an explain question, you will need to give your reasons for why it's important to manage and promote a positive digital identity. You could explain why you do this yourself and what you expect to gain from doing so.

Q2. Describe the following possible employee screening checks that an employer might carry out:

- Disclosure barring service
- Guilty by association
- Security checks
- Credit checks

You will need to provide a full description for each item in the table. You might include why and when an organisation uses each one and what's included.

Q3. Consider potential consequences of unsatisfactory findings as a result of employer checks:

Think about what might happen if anything is found within the checks. Are findings different for different industries and jobs? Do you know of anytime that a person has had anything found in their checks? If so what were the consequences?

Q4. Describe the following security clearance levels. You must include when each one may be used:

- BPSS
- SC
- DV

You will need to provide a full description for each item in the table. You might include what each one is used for and what's included within it. Think about any differences such as when one might be used rather than another.

Q5. Explain how bias can influence cyber security

As an explain question, you will need to give your reasons for why bias can influence cyber security. Are you aware of your own biases and what you need to do to overcome them?

Q6. Describe the benefits of a security by design mindset

When describing this answer think about the difference having a security by design mindset has for an organisation. Do you work in such an environment? You could describe what it's like and if it's not run with a security by design mindset, how it could be improved by implementing this.

Section 2 – Be able to identify skills required for a career in cyber security

Under Time for assessment you will find the Unit 6 Section 2 Assessment – Personal development plan document.

You should download this to your PC and use it to:

1) **Identify** skills required for a career in cyber security

Fill in the boxes on the mind-cloud with both the hard and soft skills that you require for a career in cyber security.

2) **Perform** a personal skills analysis

You've been given a blank SWOT analysis and you can change this to a SOAR by simply amending the headings if you prefer. There are links on page 1, session 2 of the course content to help you complete this. The more honest you are in your analysis the better prepared you'll be to know what you need to do to progress in your chosen cyber security career.

3) **Assess** own skills against those required for a career in cyber security [2.3]

Look back the hard and soft skills that you identified in question 1. Now think about whether these are a strength or weakness. Which ones do you need to improve on and how important are they to your chosen career?

4) **Create** a personal development plan [2.4]

Now you know what you need to improve, in this question you can document how you'll approach this. You might undertake further training or qualifications. If you're employed, you might ask to buddy a colleague or shadow someone that already does a job that you'd like to do. Create a plan here to set out your goals, which you should ensure are SMART. Keep it simple, achievable and realistic. Don't make the goals too big or you might not achieve them, think about breaking it down into small chunks.

You can save your completed skills analysis document to your own PC and use it for future reference, adding to it as you progress through your cyber security career.

Section 3 - Understand the importance of continuous professional development

Q1. Explain the term continuous professional development (CPD) and why it's important to keep it up to date:

As an explain question you will need to include why CPD is important. Is this something that you already do? How does it benefit you and your organisation?

Q2. State methods of keeping up to date with industry knowledge. This can be based on your own work industry or another one that you've researched:

You may list the different methods in this answer. If you already carry out CPD, you can list some of the ways in which you do this, for example do you have particular websites or affiliated association that you go to for information. If you are not employed, do you go to websites to find out information on the subject? What else could you do?
