Hints and Tips Unit 3

The information in this guide will be helpful to you when you are ready to complete your assessment:

Unit 3: Continuous Improvement (Kaizen)

Section 1 – Understand continuous improvement techniques (Kaizen)

Q1. Identify the main Kaizen principles and their application

As an identify question, you will need to name the main Kaizen principles and give a short sentence to demonstrate understanding for the purpose of each one.

Q2. Describe the 8 wastes of lean and how to eliminate them

You should name each of the 8 wastes of lean. For each one you will then need to describe its purpose and how to eliminate it/prevent the waste from occurring again.

Q3. Use the scenario for Physical 3D's assembly of the first prosthetic hands, on page 3 of the course material, to answer the following:

a) Identify the waste, problems or conditions that were causing difficulty for the assembly team.

In your own words, state what the problems are for the assembly. It is not enough to simply list the items of waste, problems and conditions for this answer. You must also add in a short summary to demonstrate your understanding of all that you include and how they've impacted on the team/product.

b) Explain how you think Ariel carried out the Kaizen activity and established measurable movements

Using the scenario, together with the knowledge gained from the video on page 3 of the course material, think here about how you think Ariel will have carried out the Kaizen activity – explain what he will have done and the reason for the steps he took. You could add in whether you think all steps within Kaizen methodology are relevant to this scenario. If you think some are not, explain your reasoning for this. Remember to include what measurable movements Ariel has established and why you think these are important. Do you think any more measurable movements should be implemented?

Q4. Describe the benefits of of standardised working methods

You will need to include at least two different benefits of standard working methods within your answer.

Q5. Describe the information required to create a standard operating procedure (SOP)

After reviewing the information on page 5 of the course content, for this answer, write about the information that's included within a SOP. Think about why the information is included, what's the benefit, what does it tell team members/intended audience?

Q6. Perform a workplace organisation audit using appropriate tools and techniques

In the Time for assessment area on page 4 of the course material, you have been given an image of a workplace. You should use this to perform your audit. The document to use for your audit is also included within the [Time for assessment – Workplace Audit Document](#). Complete this, save to your PC and upload it with your completed assessment.

Q7. Review the case studies within unit 2 and 3 and select one activity or area to [prepare a standardised work document that eliminates variance to process](#). You may consider any of the following case studies and select [one area or activity](#) for your document.

Use the table provided to select ONE area or activity that you'd like to use to prepare your standardised work document. E.g. if you'd like to use the case study for keeping the office clean and tidy at physical 3D, you can then choose ONE of the activities such as emptying the rubbish.

Once you've decided on your activity/area, scroll down the assessment to the SOP and complete all boxes. You do not need to include 10 steps, but should include as many as you can to ensure that variance is eliminated.
