Hints and Tips Unit 4

The information in this guide will be helpful to you when you are ready to complete your assessment for the following unit:

Unit 4: Understand Common Threats To Cyber Security

Section 1 – Know about common and emerging threats to cyber security

Q1. Provide a description of common and emerging threats to cyber security.

This question is quite straightforward. You simply need to describe what the common and emerging threats to cyber security are. Try to consider all of the following in your response.

- phishing
- spear phishing
- vishing
- smishing
- waterholing
- synthetic identities.

Section 2 – Understand what is meant by malicious software

Q1. In the box below, provide an **explanation** of what is meant by **malicious software**.

For this question you need to think about the different types of malicious software and what it is they do. Try to consider the following in your response.

- Ransomware
- Viruses
- Spyware
- Trojans
- worms

Q2. In the box below, **identify** the different ways that malicious software can infect a system.

This question is quite straightforward and you simply need to identify how malicious software infects a system. This is an identify question so you can list your responses.

Q3. In the box below, **identify** the different methods that can be used to remove malicious software from an infected system.

As with question 2 this is an identify question so you can list the different methods that can be used to remove malicious software.

Section 3 – Understand physical threats to cyber security

Q1. In the box below, explain why perimeter access control is important.

This is an explain question so try to provide good detail in your answer. Think about protection and monitoring boundaries, access to certain areas relating to people, vehicles and materials.

Q2. In the table below, give three examples of when checks and challenge on a premises may be needed.

When do you think checks and challenges might be needed?. Think about access to premises and specific areas when formulating your response.

Q3. In the table below, Identify the possible threats to a business presented by the use of the following: [3.3]

This question is an identify question but for networking infrastructure you must make sure that you consider the threats presented by open WI-FI and Routers and mention these in your responses.

Q4. In the table below, give examples of possible threats presented by remote working.

When formulating your answer for this question focus on the threats that remote working present in relation to cyber security. Think about damage, loss, theft of equipment. Levels of protection and how easy could it be for others to be able to see and access login information or confidential materials.

Q5. In the box below, describe best practice which can help to minimise physical threats to cyber security.

This is a describe question so try and provide good detail in your answer. Things to consider for this question relate to monitoring, access controls, ID management, human firewalls.
