Unit 3 - Cyber Security Testing Vulnerabilities and Controls

Learning outcomes / Assessment criteria

1 Understand common types of testing in cyber security

- 1.1 Explain different types of cyber security testing
- 1.2 Identify why cyber security testing is important
- 1.3 Compare types of cyber security testing
- 1.4 Consider mitigations following cyber security testing
- 1.5 Explain why it is important to retest following any changes made
- 1.6 Explain how the outcomes of cyber security testing can be reported
- 1.7 Explain why the outcomes of cyber security testing must be reported

2 Be able to reduce or remove potential cyber security vulnerabilities

- 2.1 Identify cyber security vulnerabilities
- 2.2 Demonstrate the steps to be taken when a vulnerability has been identified
- 2.3 Apply the correct response to the vulnerability
- 2.4 Develop an appropriate communication to mitigate future vulnerabilities

3 Understand controls in cyber security

- 3.1 Identify cyber security controls
- 3.2 Explain a basic cyber security framework
- 3.3 Evaluate a cyber security framework

4 Be able to apply a cyber security control

- 4.1 Explain how to apply controls
- 4.2 Implement a basic cyber security control
- 4.3 Justify the implementation of the chosen cyber security control
- 4.4 Explain why a control might not be applied
