Hints and Tips Unit 4

The information in this guide will be helpful to you when you are ready to complete your assessment:

Unit 4: Cyber Security Incident Response Level 3

Section 1 – Understand what is meant by a cyber security incident response plan

Q1. Describe what a cyber security incident response plan is used for and explain when it is used. Ensure that you include the checklist as well as the overall plan [1.1] [1.2]:

There are two parts to this question and may therefore be a lengthy answer. You must ensure that you include the description for what a cyber security incident response plan is used for and the explanation for when it is used. Your answer must contain reference to the checklist and the overall plan.

Q2. Describe the stages of a cyber security incident response lifecycle

There are incident response lifecycles provided within the course content and you may use one of these for your answer, or you may research your own. Whichever you use, it's important that you describe the stages within it, but do not copy directly from the source document. Remember to include which lifecycle you are using for your answer.

Section 2 – Be able to develop a cyber security incident response plan

Q1. To answer this question you will need to download the Cyber Security Incident Response Plan template document on page 2, session 2 of the course content. The document contains a template of a cyber security incident response plan, which you will need to complete. To do this, you will need to:

- Read the case study for Grange Road Secondary School
- Complete the response plan

When you've completed the document, save it to your hard drive, and when ready, upload it to the V2L platform with your completed assessment.

Q2. Now that you've completed your incident response plan, explain the following:

- a) why it is important that Grange Road Secondary School has a cyber security incident response plan
- b) why it is important that the cyber security incident log is maintained
- c) why it is important that there is a cyber security incident response plan in place at Grange Road Secondary School

This question is in 3 parts and you must ensure that you include all 3 parts (a, b and c) in your answer. You are asked to explain each one and therefore will need to give your reasons for your decisions. You could include what the alternative would be and why your choice is the best one for the situation. .

Section 3 - Be able to develop an incident post mortem report

Q1. Explain what is meant by incident post-mortem

This is an explain question and you will therefore need to detail what is meant by an incident post-mortem. You could include what it will achieve for the business.

Q2. Create a post-mortem report of an incident

To complete this question you will need to download the Cyber Security Incident Post Mortem Report template document on page 2, session 3 of the course content. The document contains a template of an incident post-mortem report, which you will need to complete. To do this, you will need to:

- Read the case study for the family-owned construction company
- Complete the post-mortem report

When you've completed the document, save it to your hard drive with your name in the title, and submit it with your completed assessment.

Q3. Now that you've completed your incident post-mortem report, explain the structure that you've chosen and why this is best for the incident within the scenario

For this question you will need to think about your post-mortem report and explain the structure that you've chosen. Think about what you've included and why this is best for the incident that occurred.

Q4. How did you consider the importance of the following when carrying out your incident post-mortem?

- Integrity
- Rigour
- Discipline

You must make reference to all 3 bullet points in your answer for this question. For each one, think about why it's important that it was considered and how it impacted the post mortem.

Q5. Reflect upon your post-mortem and make **recommendations** based on your findings

Reflect on your post-mortem report and think about: What is best about it? What part did you enjoy the most? Is there anything else you could have included? Could you have done anything better? Why did you include what you did?

For the recommendations: include what the organisation needs to do next. Is there further training needed? Are there still areas of weakness within the organisation? Do you think the same or a similar incident is likely to re-occur? Is there sufficient accountability within the organisation?
