Hints and Tips Unit 1

The information in this guide will be helpful to you when you are ready to complete your assessment for the following unit:

Unit one: Lean organisation techniques in business

Section 1 - A Lean Environment

Q1. What are the principles of lean organisation techniques? Name and describe the 5 main principles below.

For this question you must name and describe five principles of lean organisation techniques. Researching how other companies have reduced waste and improved the value of service using lean techniques will help you get a grasp of the basics.

Take a look at the following links to see some real life examples of lean management techniques being used in business settings:

<http://businesscasestudies.co.uk/jaguar/lean-production/introduction.html>

<http://businesscasestudies.co.uk/nestle/achieving-sustainability-through-lean-production/introduction.html>

<https://www.england.nhs.uk/improvement-hub/wp-content/uploads/sites/44/2017/11/Going-Lean-in-the-NHS.pdf>

Q2. Explain the benefits of a lean environment.

When answering this question, you can use a workplace or organisation that you're familiar with, or the case study provided. Keeping in mind the seven different types of waste and the benefits of eliminating each of them will help you when answering this question.

Section 2 - The Productivity Needs Analysis process

Q1. Describe the process for conducting a productivity needs analysis (PNA). Use the boxes below to complete your answer.

You must complete all three parts of the question. While you don't need to use specific examples in your answer, it might help to think about some of the case studies in the course content when completing this question.

Q2. Undertake a Productivity Needs Analysis (PNA) for the organisation in the case study below.

This question is split into four parts and you are asked to undertake a productivity needs analysis (PNA) for the organisation in the case study. Make sure you complete all the sections of the question as they are there to help you complete your productivity needs analysis.

You must come up with four objectives and processes that could be implemented to close the productivity gap. Having a look at the case studies in the course content should help you decide which measures should be looked at from the case study.

Measures are not to be confused with objectives. Remember that measures are the various types of information that show business performance.

Objectives are something that the business sets as a target or goal. You should try to be as specific as possible when setting your own objectives, using numbers or timescales in which the objective can be achieved wherever possible.

Section 3 – Produce a process map

Q1. Using one of the two scenarios provided, produce a process map. Make sure it includes the appropriate symbols and terminology. On your process map, give consideration to value added and non-value added steps in the process and any waste which occurs.

Remember you only need to create a process map for one of the scenarios provided. As a basis, you could use some of the suggested points to consider in your process map. The symbols provided are there to help and if you need more than one symbol you can easily add more by copying and pasting.

With process maps, the question of value added or non- value added is about whether steps in the process add value to the process being mapped. You need to think about each individual step in the process and consider which of these steps specifically add value and which steps are non-value added, rather than evaluating whether the entire process itself adds value. Demonstrate that you have considered which steps are value added or non-value added by making notes in the box provided.

You may find it easier to create your process map online. You could consider using a site such as: <https://www.draw.io/> to assist you. If you do use this site then you'll need to export your process map in order to save it. You can do this by going to *File > Export as > PDF* on the website. Save the file to your computer to upload as an additional file after you have uploaded your Assessment.
